

Post Consultation Standard Analysis Detail

Clarendon Lodge Medical Practice

The General Practitioner Assessment Questionnaire (GPAQ) is a patient completed questionnaire to find out what patients think about care from both their general practice and their general practitioner. It specifically focuses on aspects of general practice that are not covered elsewhere in the Quality and Outcomes Framework (QOF). These include access to GP services, inter-personal relationships and continuity of care.

GPAQ has been developed at the National Primary Care Research and Development Centre (NPCDRC) in Manchester, and is based on their earlier GPAS questionnaire. It is now widely used in UK general practice and forms part of the QOF for the 2004 GP contract.

There are two forms of GPAQ. The post-consultation version is completed by patients after a consultation. The postal version is administered as a 'mail-shot' and asks people about their general experiences of their GP or practice.

Calculation of results for each question

For most questions, your patients' responses are transformed to a scale of 0 to 100. 100 represents the best possible response; 0, the worst. For other questions, the value for the indicator is normally a percentage. Where it is possible to compare these scores to national averages, we have done so. In these instances, scores are given a 'traffic-light' to indicate whether they are much higher or lower than average.

Reading the traffic light values

The traffic-light values relate to how one GP (or practice) compares to other GPs (or practices). They are adjusted to be comparable with the national benchmarks, published by the NPCDRC. The colour indicates whether you are lower or higher than others. For most of the GPAQ indicators, green represents a high score (you're doing well) and red a low score (not so well) in comparison to other GPs or practices. These colours are determined by your 'percentile rank'. For example, if your patients rate you more highly than 95% (19 out of 20) of other GPs' patients, then your 'percentile rank' will be 96 or higher. The converse also applies. If they rate you as poorly as the bottom 4% of GPs' patients, then your 'percentile rank' for this indicator will be 4 or less. Percentile ranks from 0 to 4 correspond to red (5% of GPs), 5 to 33 correspond to yellow (29% of GPs) and 34 to 100 correspond to green (66% or two-thirds of GPs). Not all indicators have a national mean for comparison, so only some are traffic-lighted in this way.

Interpretation

For most of the Patient Survey indicators, green is better than average and yellow to red are increasingly worse than average. The results are the opinions of patients responding to the survey and may not be representative if the number of responses used in the analysis is less than 50.
